

The Photographic Eye

With Penta-
Prism Eye-
Level Reflex
Viewfinder in
Position

1950

1950 KINE EXAKTA—MODEL "V"

The Only 35mm Single Lens Reflex Camera with Two Interchangeable Eye-Level and Waist-Level Viewfinders!

The human eye, that perfect optical system devised by Nature, was the inspiration for the Penta-Prism viewfinder of the Kine Exakta "V". Like the human eye, the image in the viewfinder is shown in full life size, upright, and correct left to right. You see a direct image without parallax error even when shooting at the closest distances—the same direct image that is captured on film.

Photographers who require a perfection that approaches the precise image registration of human vision — doctors, dentists, scientists, sportsmen—choose the Kine Exakta "V". Like them, you will consider it the world's most efficient precision miniature.
