

CLOSE-UPS FROM A DISTANCE IS NOW POSSIBLE WITH NEW "OVERSIZED" BELLOWS EXTENSION AND 400MM MEYER TELE-MEGOR TELEPHOTO LENS

When you want to take close-ups of far-away subjects, but are prevented from getting close to the subject (as a flowering branch high above the ground, on a tree, or of a rapidly moving small animal) or if you do not care to work close to avoid lighting your subject with a strong beam of light, you may now use the Exakta "oversized" Deluxe Bellows Extension with 400MM Meyer Tele-Megor F5.5 Telephoto lens and get close-ups from a distance.

The "Oversized" Deluxe Bellows Extension is specially designed to accommodate and work with the Wide-Diameter 400MM Tele-Megor Telephoto lens, thereby obtaining perfect results with no vignetting—even when the extra-long bellows are extended beyond normal limits!

Now, with the "Oversized" Deluxe Bellows Extension and 400MM Tele-Megor Telephoto lens, the Exakta Camera Owner can optically reach out, and photograph close-ups of distant indistinguishable subjects and record them perfectly on film.

When not attached to the Bellows Extension, the 400MM Tele-Megor is used as a regular Telephoto with the Exakta camera.

The "Oversized" Deluxe Bellows Extension for Exakta is priced alone at \$99.50, or with 400MM Meyer Tele-Megor F5.5 Telephoto lens complete at \$250.
